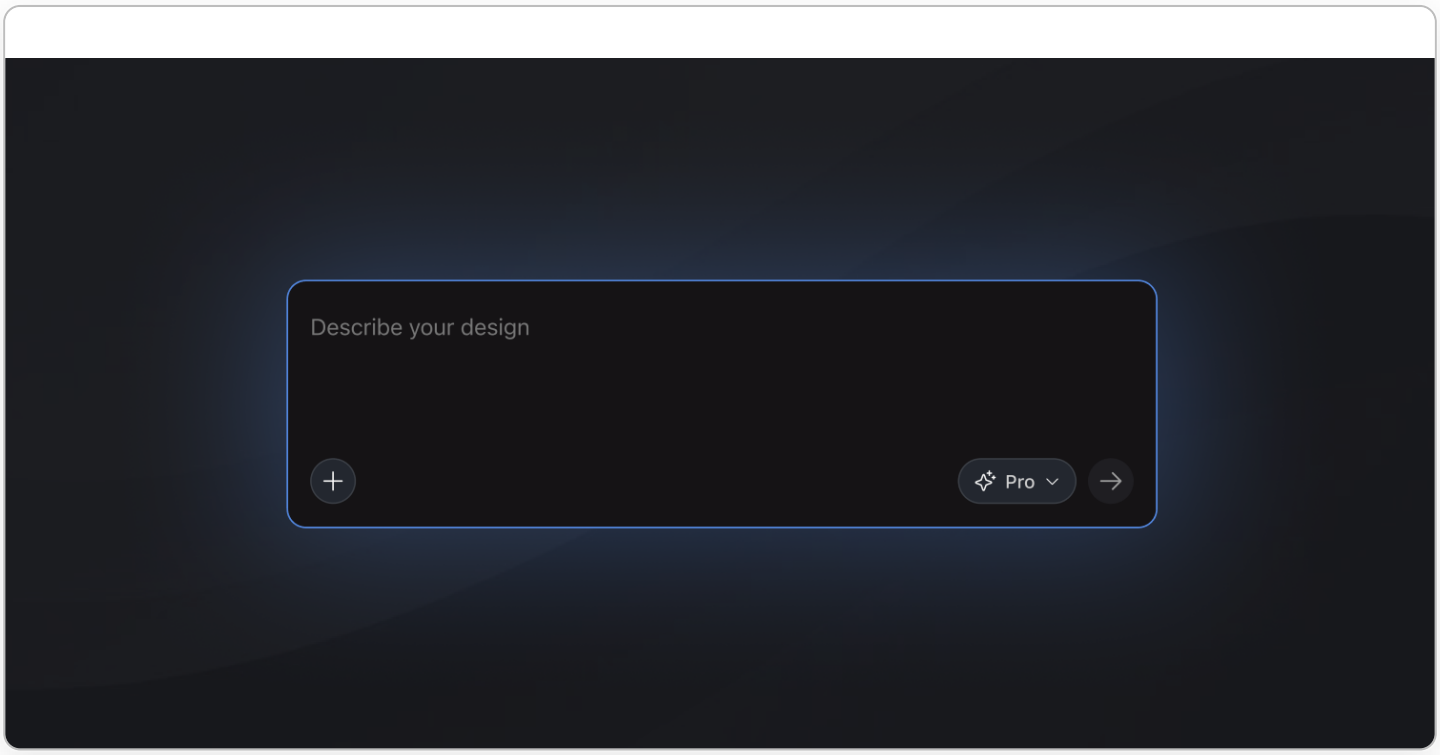
Effective Prompting

Effective practices to iterate towards effective results



This guide provides instructions for crafting effective prompts to design and refine your app with Stitch.

Starting Your Project

Choose to start with a broad concept or specific details. For complex apps, start high-level and then drill down on details screen by screen.

High-Level vs. Detailed Prompts

Start with a general idea.

PROMPT

HIGH-LEVEL An app for marathon runners.

Describe core functionalities for a better starting point.

PROMPT

DETAILED An app for marathon runners to engage with a community, find partners, get training advice, and find races near them.

Set the Vibe with Adjectives

Use adjectives to define the app's feel (influences colors, fonts, imagery).

PROMPT

ADJECTIVES A vibrant and encouraging fitness tracking app.

PROMPT

ADJECTIVES A minimalist and focused app for meditation.

Refining Your App by Iterating Screen by Screen

Refine with Specific, Incremental Changes

Stitch performs best with clear, specific instructions. Focus on one screen/component and make one or two adjustments per prompt.

- **Be Specific:** Tell Stitch *what* to change and *how*.

Change the primary call-to-action button on the login screen to be larger and use the brand's primary blue color.

- **Focus on Specific Screens/Features:**
  - **E-commerce Detail Page:** “Product detail page for a Japandi-styled tea store. Sells herbal teas, ceramics. Neutral, minimal colors, black buttons. Soft, elegant font.”
  - **E-commerce Detail Page:** “Product detail page for Japanese workwear-inspired men’s athletic apparel. Dark, minimal design, dark blue primary color. Minimal clothing pictures, natural fabrics, not gaudy.”

Describe Desired Imagery

Guide the style or content of images.

- **Specific Image Style:** “Music player page for ‘Suburban Legends.’ Album art is a macro, zoomed-in photo of ocean water. Page background/imagery should reflect this.”

Controlling App Theme

Colors

Request specific colors or describe a mood for the color palette.

- **Specific Color Prompt:** `"Change primary color to forest green."`
- **Mood-Based Color Prompt:** `"Update theme to a warm, inviting color palette."`

Fonts & Borders

Modify typography and element styling (buttons, containers).

- **Font Style Prompt:** `"Use a playful sans-serif font."` OR `"Change headings to a serif font."`

- **Border/Button Style Prompt:** `"Make all buttons have fully rounded corners."` OR `"Give input fields a 2px solid black border."`

PROMPT

COMBINED THEME Book discovery app: serif font for text, light green brand color for accents.

How to Modify Images in Your Design

Be Specific When Changing Images

Clearly identify the image to modify. Use descriptive terms from the app's content.

- **Targeting General Images:** `"Change background of [all] [product] images on [landing page] to light taupe."`
- **Targeting a Specific Image:**

On 'Team' page , image of 'Dr. Carter (Lead Dentist)' : update her lab coat to black.

Coordinate Images with Theme Changes

If updating theme colors, specify if images should also reflect these changes.

- **Prompt:** `"Update theme to light orange. Ensure all images and illustrative icons match this new color scheme."`

Changing the Language of Your App's Text

Use the following prompt:

- **Prompt:** `"Switch all product copy and button text to Spanish."`

Pro Tips for Stitch

- **Be Clear & Concise:** Avoid ambiguity.
- **Iterate & Experiment:** Refine designs with further prompts.
- **One Major Change at a Time:** Easier to see impact and adjust.
- **Use UI/UX Keywords:** (e.g., "navigation bar," "call-to-action button," "card layout").
- **Reference Elements Specifically:** (e.g., "primary button on sign-up form," "image in hero section").
- **Review & Refine:** If a change isn't right, rephrase or be more targeted.
